## EDUCATION

### VIT Bhopal University

B.Tech., Computer Science (Specialization in A.I. & M.L.)

CGPA: 8.91

Ashta, MP  
August 2023 – Present

### Govt. Excellence H.S. School High School

High School

10th Grade: 100%

12th Grade: 94%

Betul, MP  
April 2019 – March 2023

## TECHNICAL SKILLS

**Programming Languages:** Python, C++, C, HTML, JavaScript, CSS

**Frameworks & Libraries:** ReactJs, NodeJs, PyTorch, PyPDF2

**Databases:** MySQL, MongoDB

**Tools & Platforms:** Git, Figma, Scapy, PyQt5, Dash

## EXPERIENCE

### AI Developer (Internship)

AlgoFed

Dec 2024 – Feb 2025  
Remote

Engineered Python scripts using PyPDF2 and pdfminer to **accurately parse and extract hardware details** (CPU, RAM, serial numbers) from diverse PDF documents.

Designed and built a hardware data comparison tool that **identified missing or mismatched information** by cross-referencing extracted PDF data with predefined datasets.

Automated robust error-handling protocols for corrupted PDFs and **generated detailed mismatch reports** in JSON and text formats, improving data validation efficiency.

### C++ Developer (Internship)

Code Casa Pvt. Ltd.

Sep 2023 – Oct 2023  
Remote

Architected a file-based user registration and login system in C++, implementing secure data storage and authentication mechanisms.

Developed a comprehensive hotel management system to streamline customer records, enabling efficient booking, searching, updating, and deleting of records via file I/O operations.

Pioneered solutions for practical coding projects, **enhancing proficiency in file handling**, data structures, and foundational system design.

## PROJECTS

### Predictive Network Traffic Analyzer: Netlyze

Python, PyQt5, Scapy  
§ [GitHub](#)

Constructed a real-time desktop application for network traffic analysis using Python, PyQt5, and Scapy.

Applied hybrid machine learning models (Random Forest and Gradient Boosting) to **achieve a 99.18% accuracy** in detecting network anomalies and threats.

Designed an offline GUI with Dash for intuitive data visualization, presenting threats, bottlenecks, and bandwidth statistics.

### Cyber Safety Learning Platform: NetNinja

React, Firebase, HTML, CSS, JS

Developed an interactive web platform using React and Firebase to teach cyber safety to children aged 5-15.

Integrated gamified learning experiences, including text-based role-playing stories, quizzes, and a child-safe AI chatbot.  
Engineered the system to combine an engaging UX with educational content for intuitive, play-based learning.

**Sentiment Analysis Web Application: Moodify**

Python, Flask, HTML, CSS, JS  
§ *GitHub*

Built a full-stack sentiment analysis application with Python/Flask backend and HTML/CSS/JS frontend.  
Implemented a BERT-based NLP model to classify user emotions into categories like Happy, Sad, and Neutral with an **overall model accuracy of 87-90%**.  
Provided real-time sentiment feedback and visualizations through an intuitive interface.

**CERTIFICATIONS & ACHIEVEMENTS**

---

**Certifications:** Python Essentials (VITyarthi), Fundamentals of A.I. and M.L. (VITyarthi), Learn Python (Code Chef)

**Achievements:** Winner of Division-Level Sanskrit Shloka, Singing, Tabla Playing, and Science Quiz Competitions

**EXTRACURRICULAR ACTIVITIES**

---
